

# Hands-on learning: Students of the University of Florence observing with the TNG

19 October 2021

L. Casetti<sup>1</sup>, E. Lusso<sup>1</sup>, M. Pancrazzi<sup>1</sup>, M. Romoli<sup>1</sup>, G. Andreuzzi<sup>2</sup>

<sup>1</sup>Dipartimento di Fisica e Astronomia, Università degli Studi di Firenze and INAF

<sup>2</sup>Fundación Galileo Galilei - INAF

# Summary

- Description of the context at Università di Firenze
- Educational aims of the experimental course of *Complementi di Astronomia*
- Description of the observing campaigns and data analysis
- Outcome of the didactic experience

# A little history.....

- Legacy: Astrophysics didactic experiments at Università di Firenze  
Two lab courses held by Prof. Landini, Righini and Stanga
- 1995-2011 *Esperimentazioni di Fisica III* for all third year physics students with : HR diagram – Muon mean lifetime– Michelson interferometer (Observations at *Osservatorio di Loiano (Bo)* )
- 2001 New organization of university degrees: *triennale* and master degrees (Physics and Astrophysics)
- 2011 *Esperimentazioni Fisica III*: from HR diagram to Hubble Law verification
- 2013 Revision of *Laurea triennale*: new optional course: Complementi di Astronomia 2013
- In 2017 the Magini donation to the Arcetri Observatory allowed to organize the first trip to La Palma within the course activity

Arcetri

Polo scientifico

# *Complementi di astronomia* course

- Optional course of *Laurea triennale* and Master degree
- First introduction to experimental astronomy
  - Theory of diffraction
  - Telescopes
  - Focal plane instrumentation
  - Spectroscopy with gratings
  - CCD detectors
- Students' short seminar on major telescopes
- Radio astronomy techniques (Stanga, Romoli) till 2018
- X-ray astronomy (Lusso) from 2019
- Observing campaigns at Loiano and TNG

# *Complementi di astronomia* course

Choice of observing targets made by students

Observing campaign at Loiano Observatory

Observing campaign at TNG since 2017

Data analysis:

- Performed inside the computer classroom at the Dept. of Physics and Astronomy using Python first and then Matlab (university students' and teachers' license),
- use of students' laptop from home during covid-19 pandemic
- now about to switch back to Python

# Covid-19 pandemic outbreak

- No campaigns in 2020
- Remote campaigns from Loiano and TNG in 2021
- 2022 ?

# Organization of La Palma campaign

- Target: third year students of undergraduate courses (*Laurea triennale* in Physics and Astrophysics) and some students of the master degree.
- November: presentation of the course inside the *Introduction to astrophysics* course
- December: manifestation of interest
- February: organization of the trip and beginning of the course
- Campaign in March/April in the week after Easter (during spring break). 5 days length
- Data analysis from April to June

2018 - 12 students

2017 - 12 students

# Grupos 2017 -> 2019

2019 - 16 students

Telescopio Nazionale Galileo (TNG)

Gran Telescopio Canarias (GTC)

# MAGIC

TRIPPER STATES

	L1	L2	L3
DARK	3	100	100
MOON	L1	3000	100
SUN	L1	1000	100
NOISE	L1	100	100
DRAG	L1	100	100

Arrows: (in blue) (in red) (in green)  
L1: 100 Hz  
L2: 300 Hz  
L3: 100 Hz

WE HAVE FUN!

- [unclear]  
- [unclear]

William Herschel Telescope (WHT)

Swedish Solar Telescope

Laser guide star tests

# Night sky observation and photography

# Dawn at Roque

OBSERVING AT THE TNG

# Imaging and spectroscopy of normal and active galaxies with DOLORES

## *Imaging with broadband filters*

- Measure the apparent diameter of the galaxies  
as redshift-independent distance estimator (rough but easy!)  
optional/to be implemented: surface density profiles, spatial variation of color, color images...

## *Long-slit spectroscopy*

- Measure the redshift  
to estimate the Hubble constant/check the Hubble-Lemaître law
- Measure emission lines width and flux  
to estimate the black hole mass (AGNs) or the star formation rate  
optional/to be implemented: rotation curves...

# Students' tasks

## *Before the observing night*

- Choose observing targets and prepare the detailed observing plan  
...under the teachers' supervision

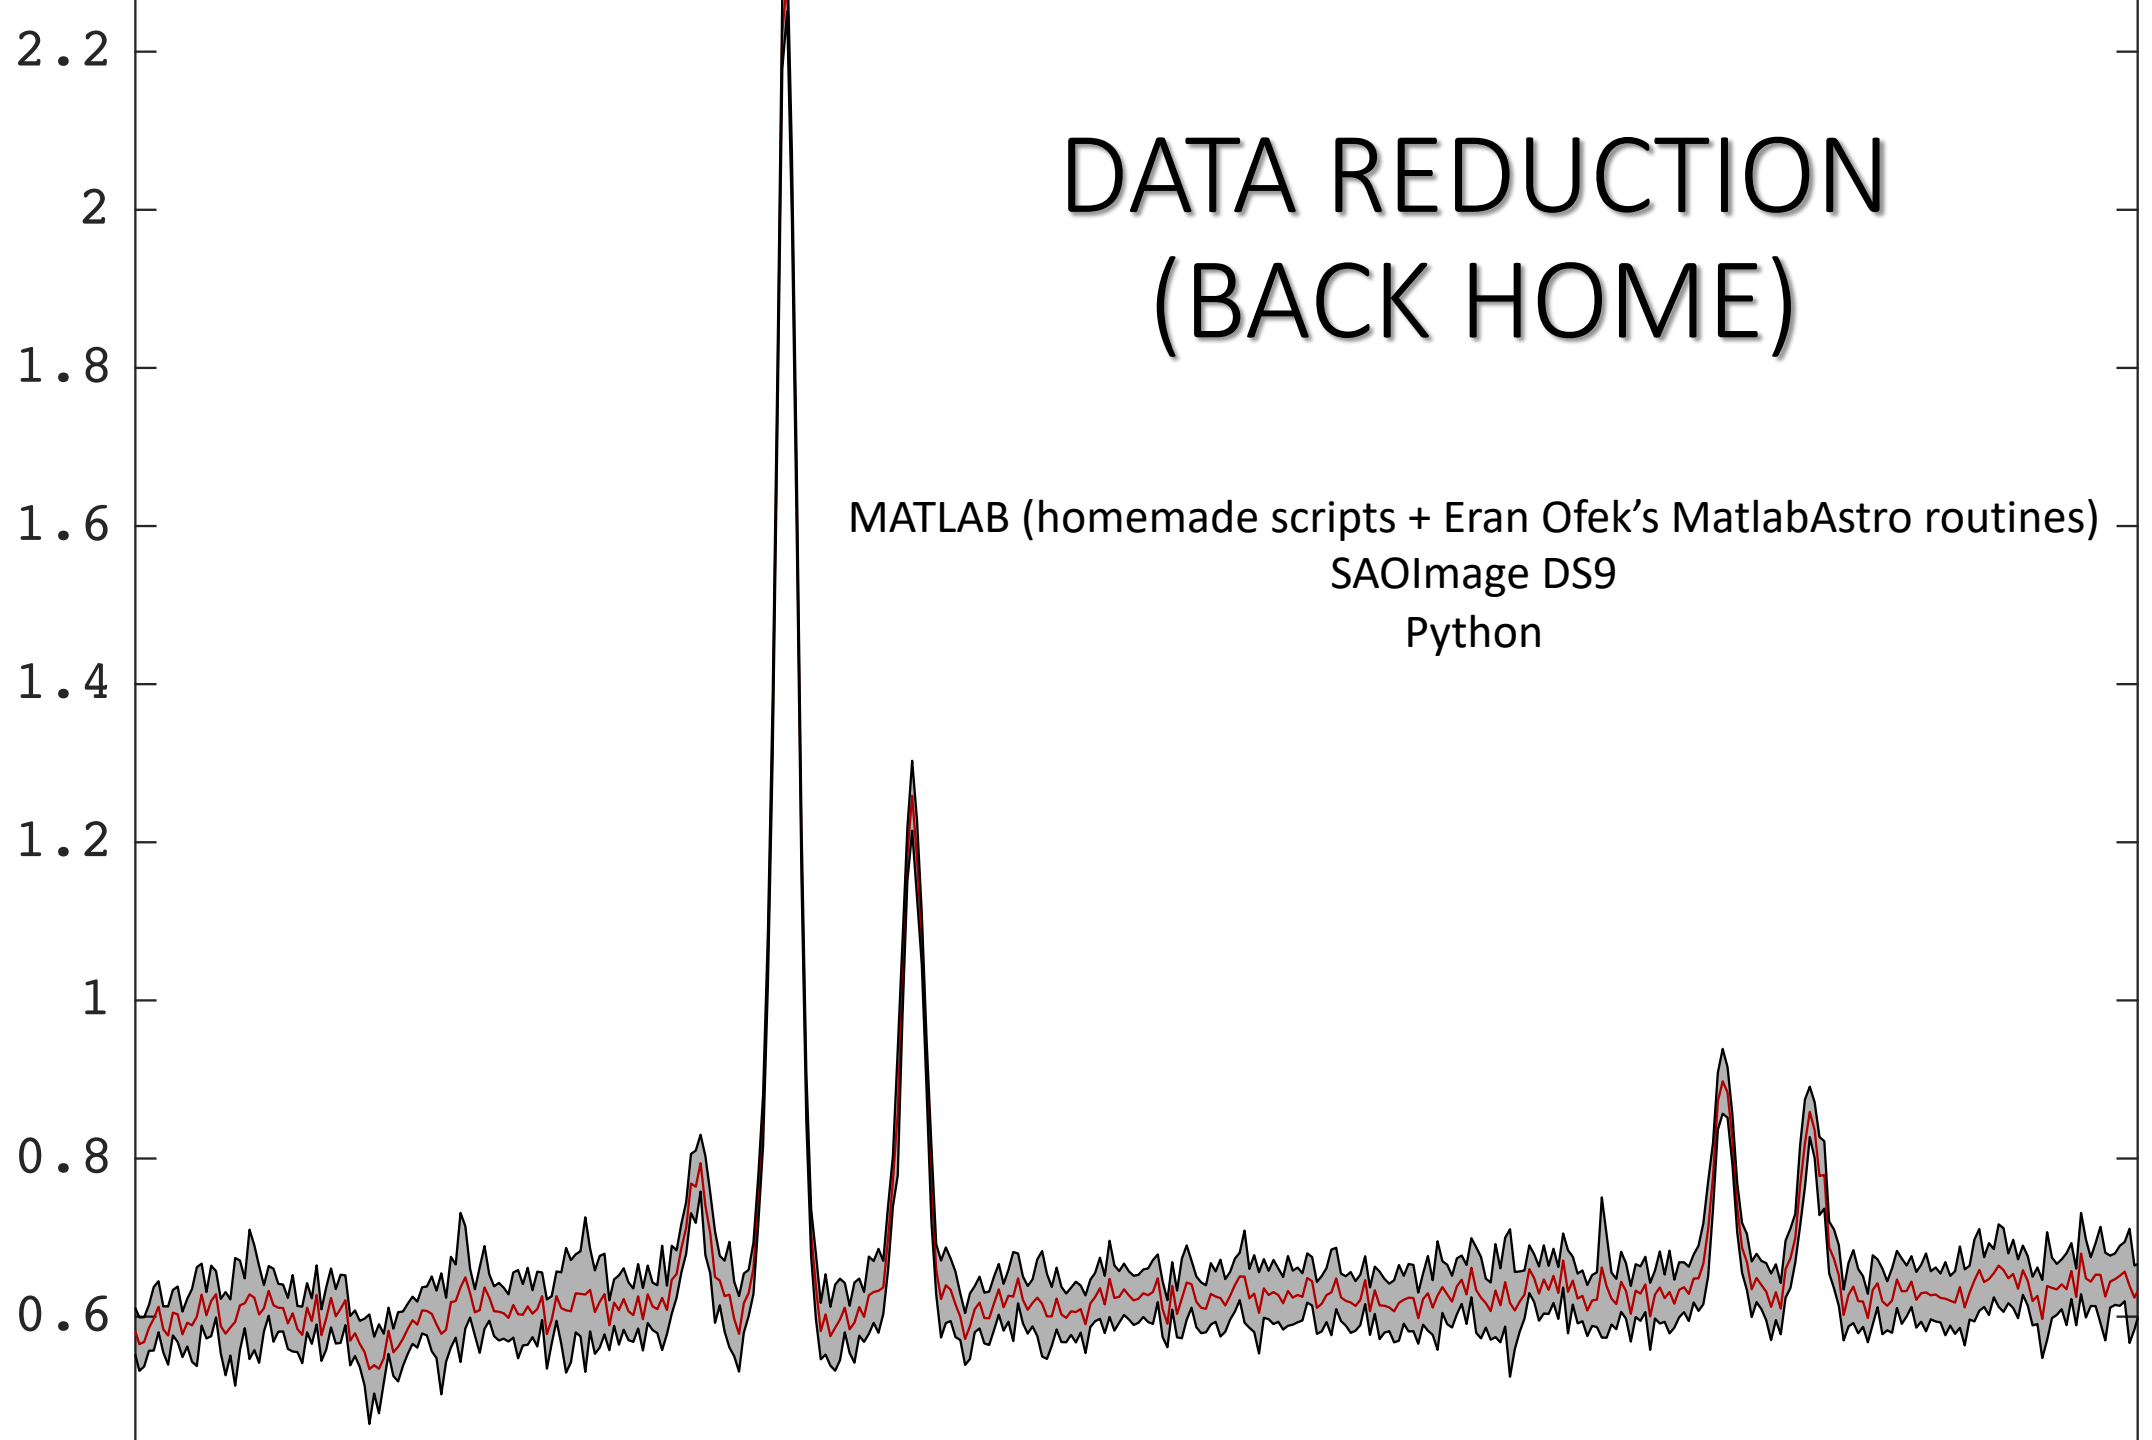

## *In the control room*

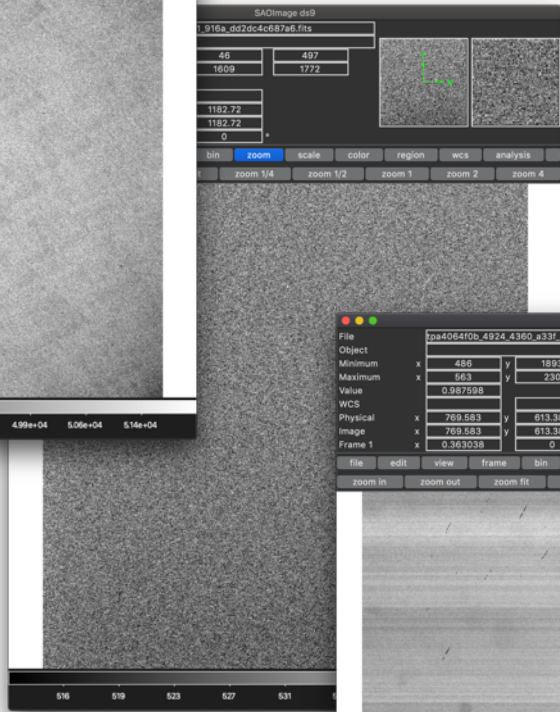

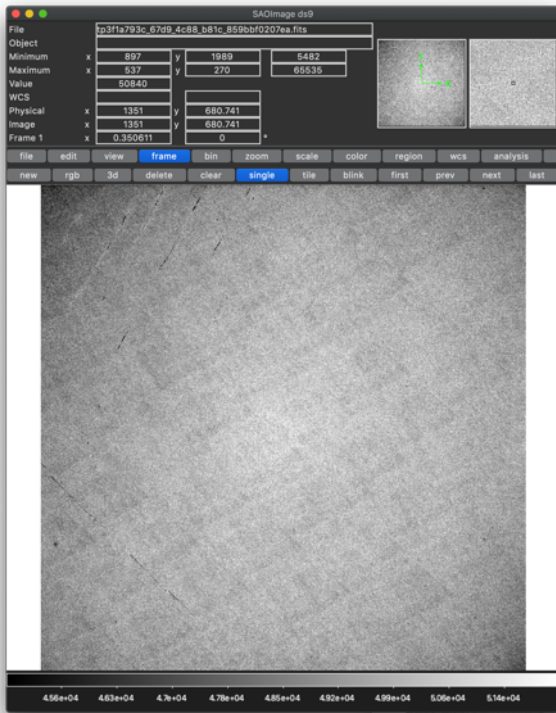

- Operate the DOLORES interface/interact with the telescope operator  
...under Gloria Andreuzzi's supervision
- Take real-time decisions  
change of integration times, switching to backup targets...

# DATA REDUCTION (BACK HOME)

MATLAB (homemade scripts + Eran Ofek's MatlabAstro routines)  
SAOImage DS9  
Python

# BIAS AND FLATS

- Master bias and flat  
*photometric and spectral*
- Statistics and readout noise

# FROM RAW TO CALIBRATED FRAMES

---

# DIAMETER AND DISTANCE

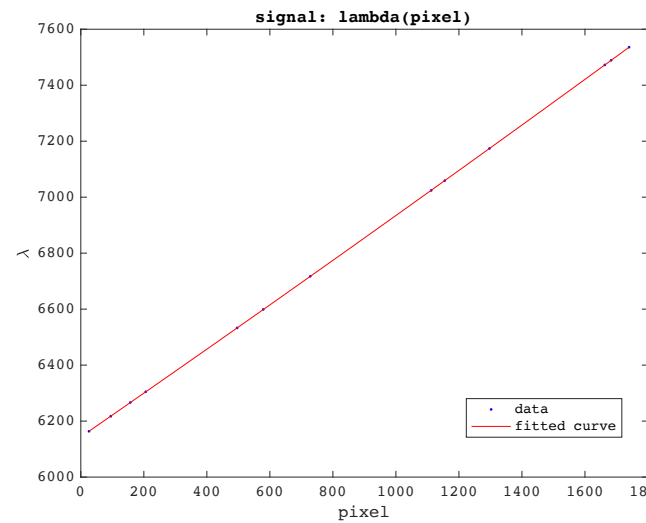

---

relative error on distance  $\approx 50\%$

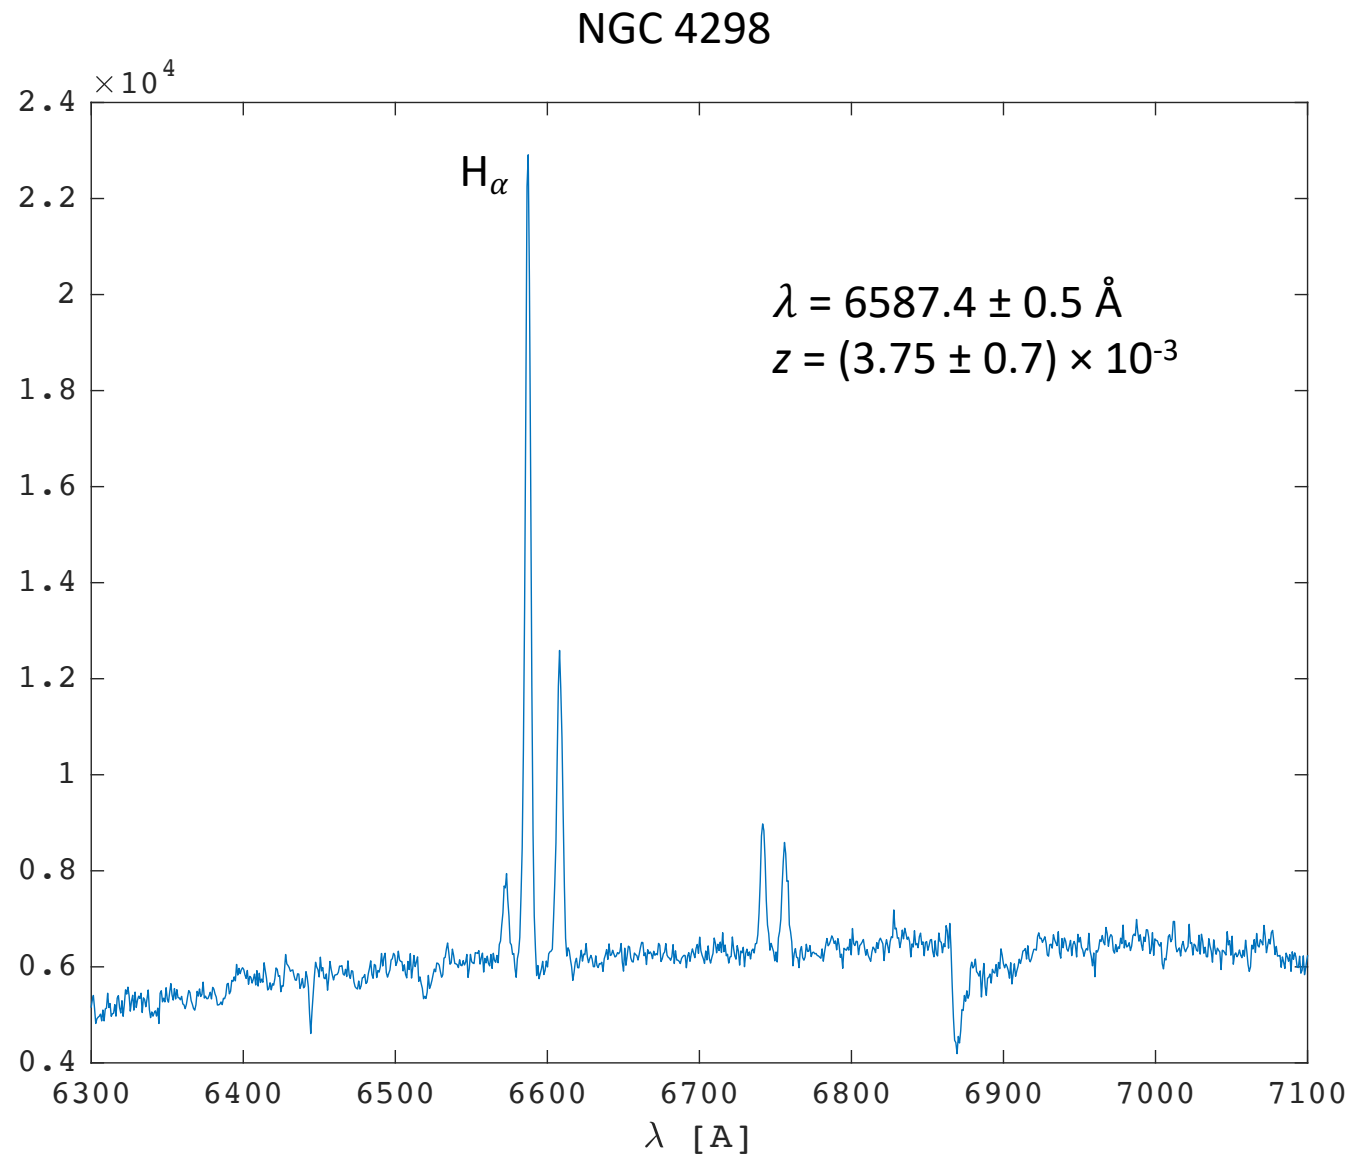

# SPECTRUM EXTRACTION, BACKGROUND SUBTRACTION AND WAVELENGTH CALIBRATION

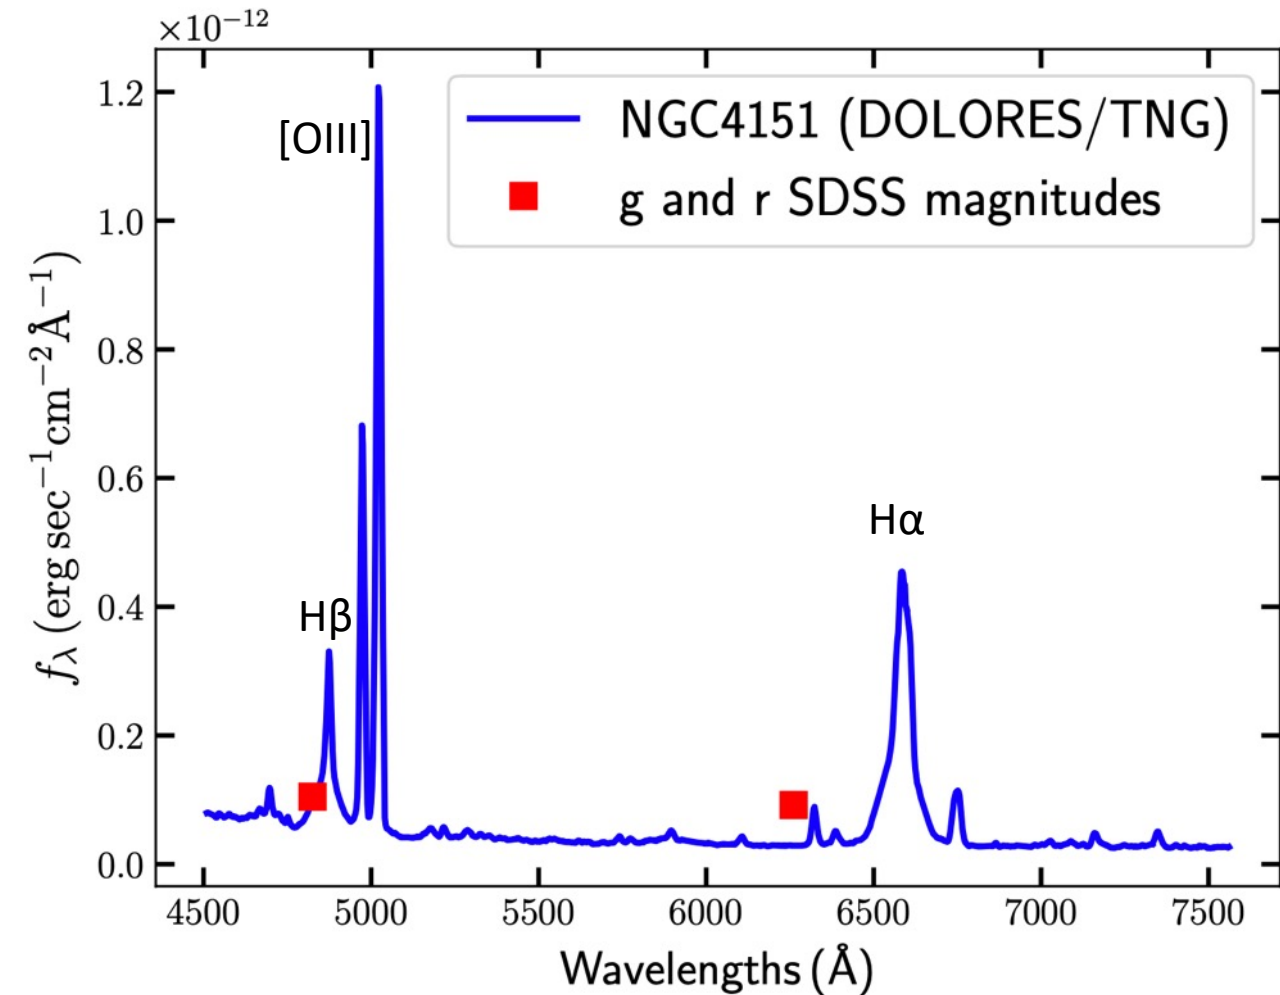

# REDSHIFT

---

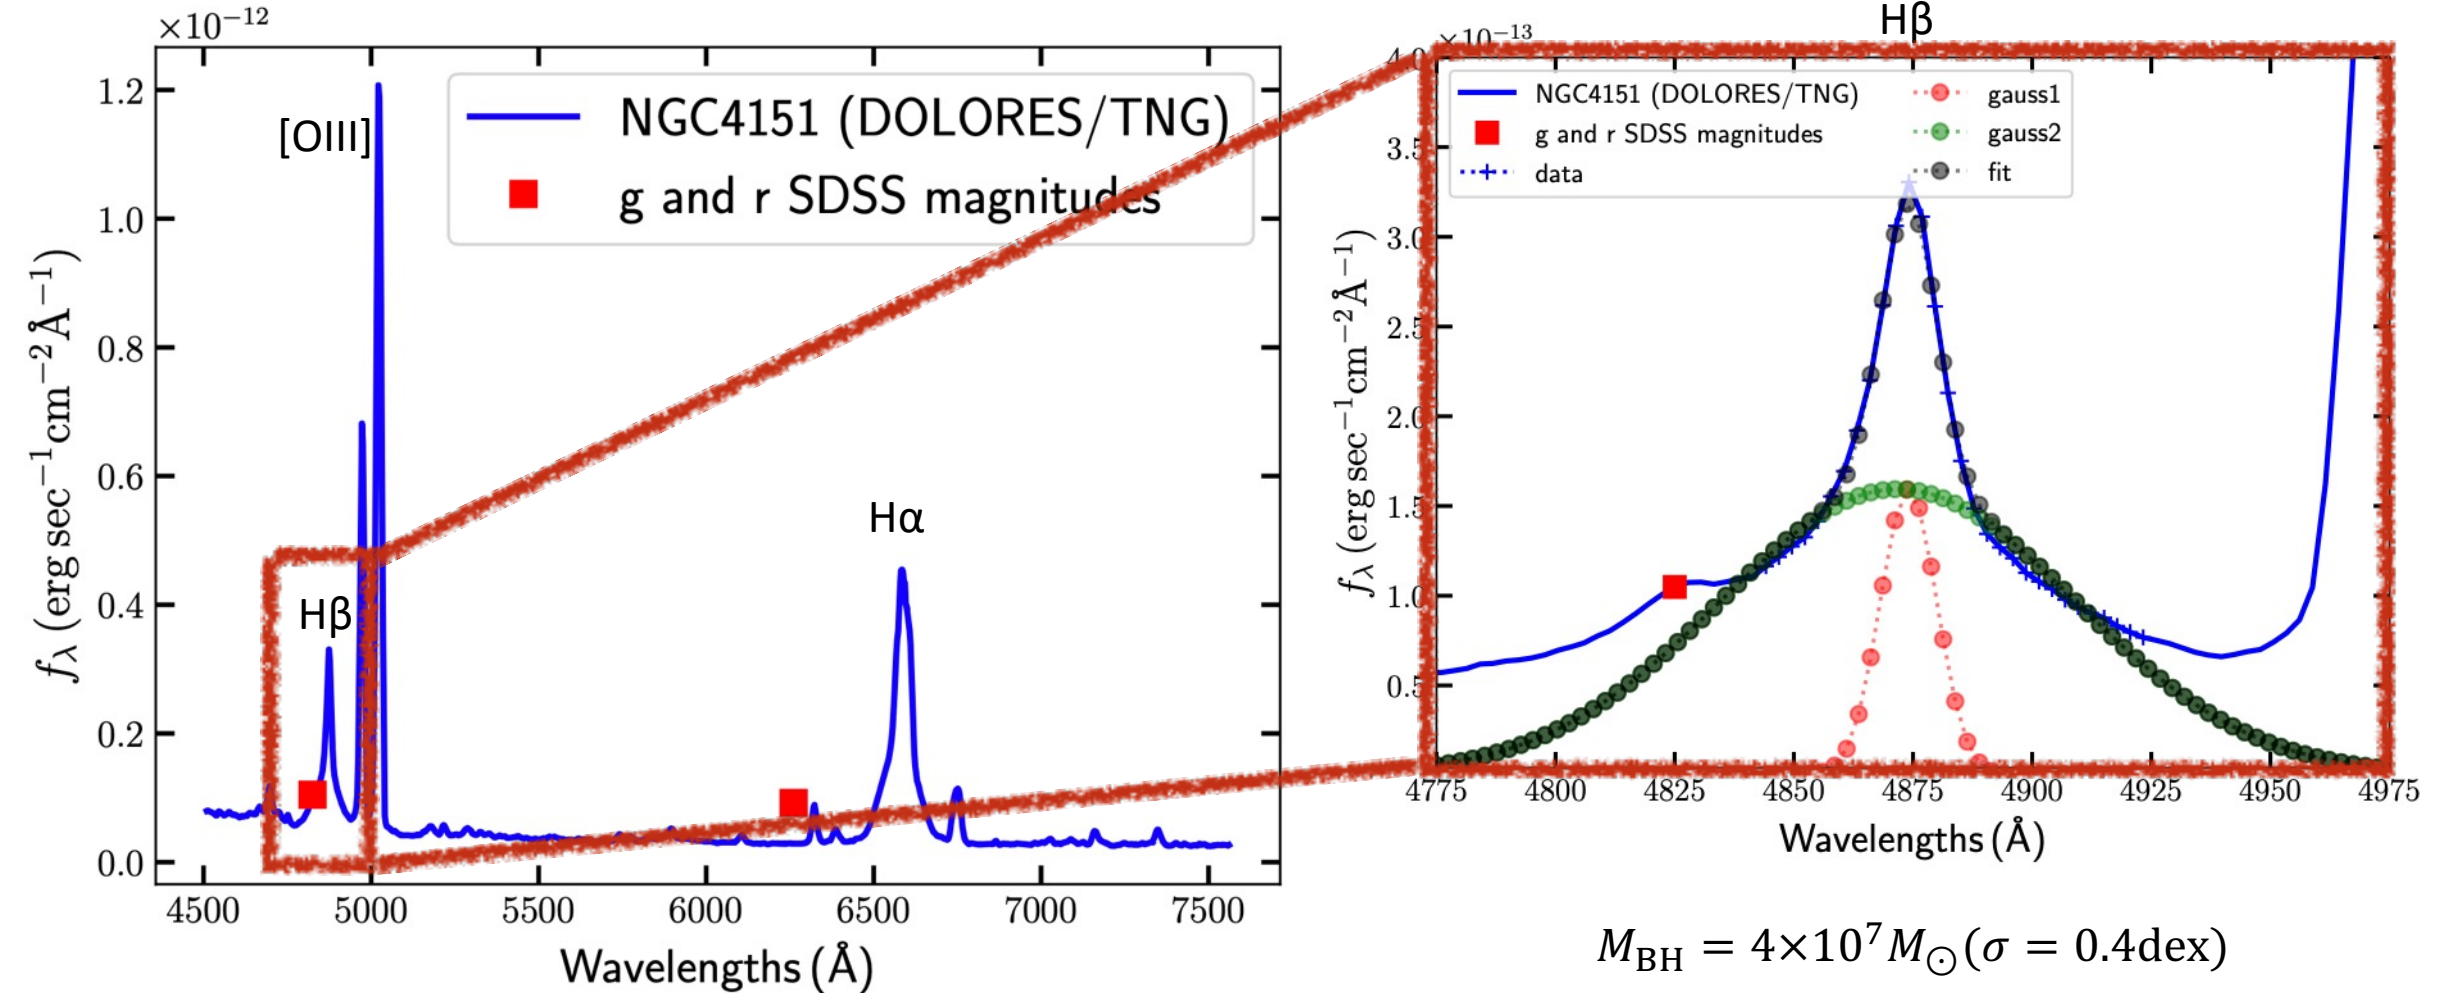

# Black hole mass and star formation rate

Flux calibrated spectrum of the Seyfert 1 galaxy NGC4151

# Black hole mass and star formation rate

Flux calibrated spectrum of the Seyfert 1 galaxy NGC4151

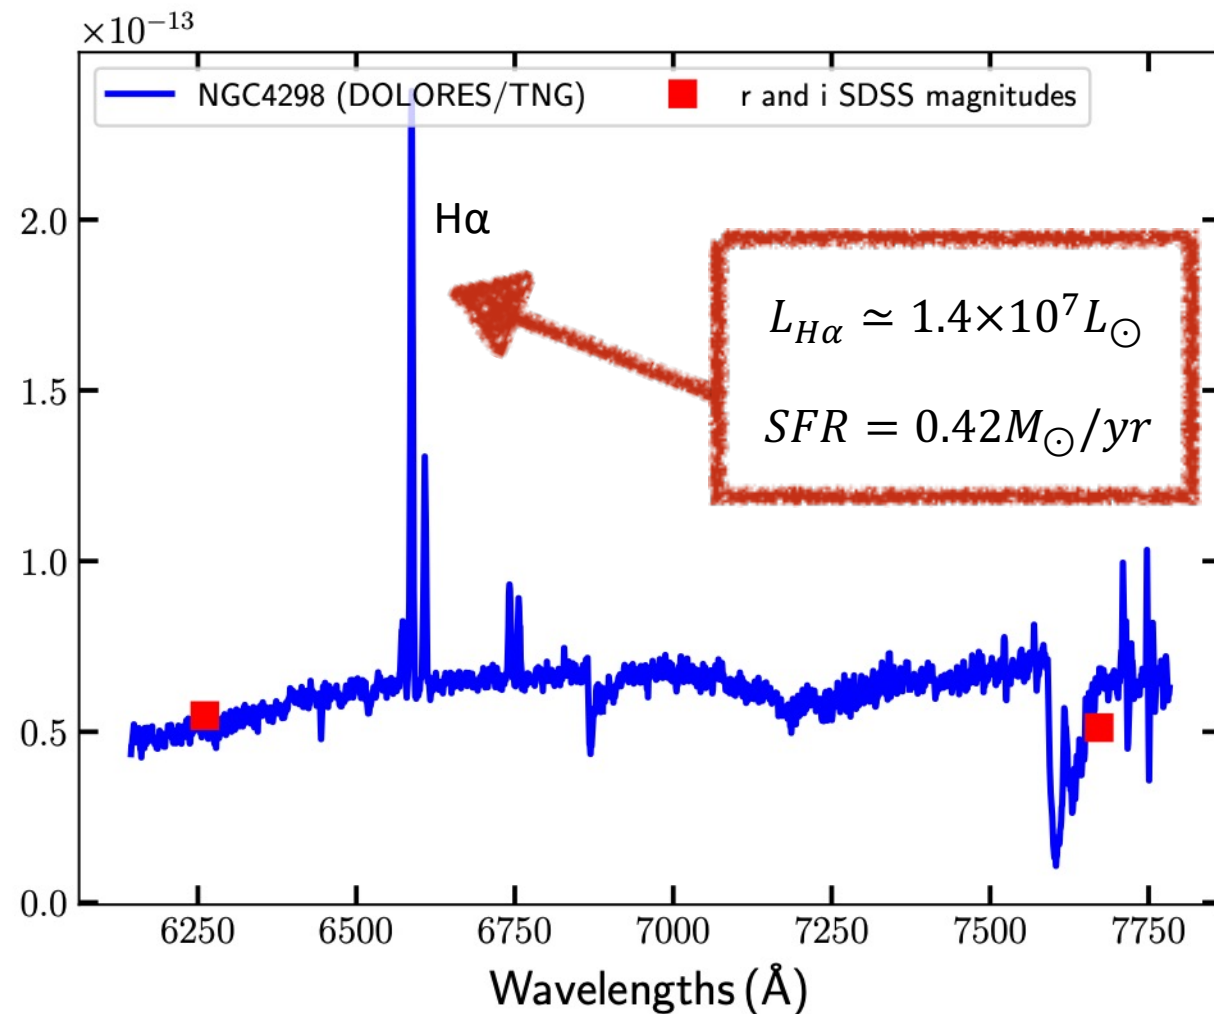

# Black hole mass and star formation rate

Flux calibrated spectrum of the Seyfert 1 galaxy NGC4151

Flux calibrated spectrum of the galaxy NGC4298

# OUR TNG GALAXY DATABASE

---

75 galaxies in the full database  
(including those observed at Loiano)

2017

NGC 3370, NGC 3899

2018

NGC 5257, NGC 5258

2019

NGC 4151, NGC 4156, NGC 4298, NGC 4302, PGC 053030

2021 *(remote session)*

MRK 141, PGC 030175, NGC 3294, PGC 2097280

Sightseeing and .....  
some relax

# Students' careers

- 40 students in total have visited La Palma
- 2 students with triennale degree using TNG data:
  - *Verifica della legge di Hubble–Lemaître in campo vicino tramite misure fotometriche e spettroscopiche*
  - *Stima della massa del buco nero supermassiccio in NGC 4151*
- 87% of participants involved in astrophysics studies among which:
  - 2 post-docs
  - 15 PhD Students (6 in Firenze)
  - 12 Master degree students
  - 6 Triennale degree students

We wish to thank:

Famiglia Magini
